Lecturer Evaluation Feedback Form

Sample specification for the Subject Lecture Review module — two supported form types

---

This document outlines two ways the lecturer evaluation form can behave, based on the current backend implementation. Both types collect the same core information from a student — a selected lecturer, a set of rated questions, and optional free-text comments — but differ in how the question set is chosen and delivered. Sample questions are included for reference; wording and count are fully configurable per client.

Form Elements Common to Both Types

- **Lecturer selector** — required dropdown listing lecturers assigned to the subject/intake.
- **Rated questions** — each question is answered with either a Yes/No response or a 5-point sentiment rating.
- **Optional comments** — free-text box (up to 1000 characters) for additional feedback.
- **Progress indicator** — a progress bar and answered/total counter track completion before submission.
- **Confidentiality note** — students are told responses are confidential and no personal identifying information is collected.

TYPE 1

Fixed Question Set — Single Evaluation Pass

In this type, the form pulls a fixed bank of questions (e.g. the first 14 active questions in the question table) as soon as the modal opens. Every eligible subject uses the same question set, and the student fills in the whole form in one sitting — there is no branching by course stage. The next eligible subject (one the student hasn't reviewed yet) is looked up on page load, and the review is recorded once against that subject.

How it works

- The system finds the student's next subject that is eligible for review and hasn't been reviewed yet.
- All questions load immediately together with the lecturer list — no extra request is needed after the student opens the form.
- The student selects a lecturer, answers every question, optionally adds comments, and submits once.
- Best suited for shorter courses or a single end-of-subject review rather than staged check-ins.

Sample Questions — Type 1

#	Sample Question	Answer Type
1	Did the lecturer arrive on time for scheduled sessions?	Yes / No
2	Did the lecturer cover the full syllabus for this subject?	Yes / No
3	Were session materials (slides, handouts) provided in advance?	Yes / No
4	How would you rate the lecturer's subject knowledge?	5-point rating
5	How would you rate the clarity of the lecturer's explanations?	5-point rating
6	How would you rate the lecturer's ability to answer questions?	5-point rating
7	How would you rate the pace at which the material was taught?	5-point rating
8	How would you rate the lecturer's overall classroom engagement?	5-point rating

5-point rating scale: Very Good · Good · Normal · Poor · Extremely Poor.

TYPE 2

Phased Evaluation — Dynamic Question Set

This type evaluates every eligible subject against three possible checkpoints — an early check-in, a mid-course check-in, and a final review at module completion — and only prompts the student once per checkpoint that hasn't already been submitted. The lecturer list loads first; the actual question set is fetched afterwards, based on the lecturer chosen and the current evaluation phase, so different phases can ask different questions (or a different number of questions) without changing the form's structure.

Evaluation phases

Phase Trigger	Fires When...	Typical Focus
AFTER_4_SESSIONS	4 or more completed timetable sessions recorded for the subject	First impressions — pacing, clarity, punctuality
AFTER_8_WEEKS	8 or more weeks elapsed since the subject's first session	Mid-course engagement, delivery consistency
MODULE_END	Subject status is marked COMPLETED	Overall performance, would-recommend, final comments

How it works

- The system checks each eligible subject's completed sessions, weeks elapsed, and completion status to determine which phase (if any) is next due, and skips phases already reviewed.
- The form opens with only the lecturer selector active; questions are loaded in the background once a lecturer is chosen, matched to the current phase.
- Because the question set is fetched dynamically, the same form shell can present a short check-in at 4 sessions and a longer, more detailed review at module end.
- Submission records which phase was evaluated, so the same subject can be reviewed again at its next phase without duplicating an earlier one.

Sample Questions — Type 2

Phase: AFTER_4_SESSIONS (early check-in)

#	Sample Question	Answer Type
1	Has the lecturer started sessions on time so far?	Yes / No
2	How clear were the lecturer's introductions to each topic?	5-point rating
3	How would you rate the lecturer's approachability so far?	5-point rating

Phase: AFTER_8_WEEKS (mid-course check-in)

#	Sample Question	Answer Type
1	Is the lecturer keeping pace with the planned syllabus?	Yes / No
2	Are your questions being addressed adequately during sessions?	Yes / No
3	How would you rate the lecturer's consistency across sessions?	5-point rating

#	Sample Question	Answer Type
4	How would you rate the usefulness of examples and exercises given?	5-point rating

Phase: MODULE_END (final review)

#	Sample Question	Answer Type
1	Did the lecturer complete the subject's full syllabus?	Yes / No
2	Would you recommend this lecturer to future students?	Yes / No
3	How would you rate the lecturer's overall teaching performance?	5-point rating
4	How would you rate the lecturer's fairness in assessments/feedback?	5-point rating
5	How would you rate your overall learning experience in this subject?	5-point rating

---

Type 1 vs Type 2 — At a Glance

	Type 1 — Fixed	Type 2 — Phased
Question set	Same fixed set every time	Changes per evaluation phase
Reviews per subject	One	Up to three (one per phase)
Loading	Questions load with the form	Questions load after lecturer is picked
Best for	Short subjects, single check	Longer subjects needing progress tracking

Sample document — question wording, rating scale labels, phase thresholds (4 sessions / 8 weeks) and total question counts are all configurable to match the client's requirements.
